DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Farrell (US 5,143,433).

Regarding claims 1 and 3, Farrell ('433) discloses a night vision backlighting system for a liquid crystal displays having a self-luminous sources 37 in primary colors of 18 being of a red, green, blue fluorescent light that mixes into white light (column 7, lines 5-18) and a light conducting plate 82.

Regarding claim 2, Farrell teaches that the light sources can be light emitting diodes (claim 21).

Regarding claim 4, Farrell teaches that the light source are fluorescent lamps (claim 1 and 2).

Response to Arguments

Applicant's arguments filed January 31, 2007 have been fully considered but they are not persuasive. The last paragraph of claim 1 cites the sequence of the primary colors however it has not been given any patentable weight. The self luminous source of the device had the structure of the light sources having primary colors and light

conducting plate as cited in claim 1, the difference was in the sequence of the operation of the light sources are claimed as a method of illumination as the use of the device, and "the manner or method in which such machine is to be utilized is not germane to the issue of patentability of the machine itself. *In re Casey, 370 F.2d 576, 152 USPQ 235 (CCPA 1967).*
